IN THE SPECIFICATION

Please amend the paragraph on page 3, lines 10-19 as follows:

Recently, in ~~co~~~~pend~~~~ing~~ and commonly owned U.S. Patent No. 6,447,703 to Waddington et al ~~Application Serial No. 09/599,458 filed on June 22, 2000~~ (the entire content of which is expressly incorporated hereinto by reference), there are disclosed methods and systems for making melt-spun, drawn and textured BCF yarns, wherein prior to texturing the yarn is subjected to differential temperature condition. Most preferably, such differential temperature condition is accomplished using the duo rolls employed in drawing the BCF, such that one of the rolls is maintained at a greater temperature as compared to the other of the rolls. The morphology of the BCF yarn can thus be variably controlled.
